

Rubrics: SOFTWARE ARCHITECTURE AND DESIGN

#	CLO	A - Fail	B - Developing	C - Expected	D - Excellent
1	Understand software architecture fundamentals.	Cannot Identify the SA fundamentals.	Identify the SA fundamentals.	Identify and explain the SA fundamentals (at least 3).	Identify and provide a clear explanation of the SA fundamentals.
2	Understand common software architecture styles.	Cannot Present any SA styles.	Present at least one of the common SA styles.	Present more than one of the common SA styles.	Present most of the common SA styles.
3	Select the appropriate software architectural style.	Cannot Present the criteria to choose a specific SA style.	Present the criteria (not complete) to choose a specific SA style.	Present the criteria to choose a specific SA style.	Present the criteria to choose a specific SA style and explain why not choose another.
4	Implement a chosen architecture style in software development.	Cannot implement or implement not correct the chosen SA style.	Apply a specific framework to implement some parts of the chosen SA style.	Apply a specific framework to implement primarily parts of the chosen SA style.	Apply a specific framework to implement completely the chosen SA style.
5	Modelling a software architecture.	Cannot model or model incorrect parts of a software architecture in a given context.	Model some parts of a software architecture in a given context.	Model most parts of a software architecture in a given context.	Model all parts of a software architecture in a given context.
6	Present the course project reports.	Cannot present the implemented reports.	Present the implemented reports and answer at least 1 question.	Present the implemented reports and answer more than 2 question	Present the implemented reports fluently and answer all questions.

Evaluate by quantitative
