ON PROJECT TRAINING

Hà Thị Kim Thoa

Step 1

Form a Group

Organizing teams and defining leadership roles effectively

Timing

Groups will be formed during the **first week** of the course, allowing students to quickly establish their teams and start collaborating.

Group Size

Each group should consist of **2 to 4 students**, fostering effective collaboration while ensuring that everyone can contribute meaningfully to the project.

Selecting a Leader

Groups must select **one leader** who will manage organization tasks, oversee code reviews, and ensure effective communication within the team.

Step 2

Choose a Topic

Selecting an engaging project
topic for success

Timing

The topic selection occurs during the **first week** of the course, setting the foundation for collaborative project development.

Option 1

Students may choose a topic from **provided assignments**, ensuring alignment with educational objectives and guidelines for the project.

Option 2

Alternatively, students can propose their own topic, but must seek guider approval, promoting creativity while ensuring project viability.

Step 3

Implementing the Assignment

Key stages and outputs for project
SUCCESS

Project Timeline

The project spans **weeks 2 to 14**, allowing ample time for thorough development and collaboration among team members.

Key Stages

There are **six key stages**: requirement gathering, analysis, design, implementation, testing, and deployment, ensuring a structured approach to development.

Final Output

The final deliverables include the **application source code** and comprehensive project documentation, showcasing the team's efforts and understanding of the project.

Step 4

Present and Evaluate

Understanding the evaluation process and expectations

Timing of Presentation

Presentations will be conducted during **Weeks 14–15**, providing ample time for preparation and refinement of projects.

Group Presentation

Each group will present and defend their project work, highlighting their findings and contributions to the course objectives.

Evaluation Criteria

Evaluation will focus on Course Learning Outcomes (CLOs) such as DevOps principles, resource management, and the overall quality of reports.

Example Project

Team Size

The project should include **2–4 members**, ensuring effective collaboration and diverse skill sets for successful completion.

Service-to-Service Communication

Implement robust **service-to-service communication** mechanisms to ensure seamless interactions between different components of the application.

Rate Limiter Client

Design a **rate limiter client** to control the number of requests sent to services, maintaining performance and preventing overload.

Technology Stack

Utilize **Spring Boot with microservices architecture** to enhance modularity and scalability in application development and deployment.

Retry Mechanisms

Incorporate **retry mechanisms** to enhance fault tolerance, allowing the application to recover from transient failures effectively.

Eureka Service Discovery

Use **Eureka service discovery** to manage microservice instances dynamically, facilitating automatic registration and discovery of services.

Figma UI Design (Optional)

Encouraging Collaborative Creativity

In this optional step, all group members and the guider can join the Figma project to collaboratively design and prototype the UI, promoting **creative freedom** and enhanced design awareness.

Leader's Role in Setup

Essential Tasks for Success

Create Repository

The leader must create a repository on GitHub or GitLab, ensuring it's accessible to all group members. This repository serves as the central hub for project development and collaboration.

Add Members

Including all team members and the guider in the repository access is crucial. This promotes transparency and ensures everyone is aligned with the project's objectives and developments.

Establish Project Plan

A clear project plan should be established to guide the development process. This plan outlines timelines, milestones, and responsibilities, fostering better organization and effective project management.
